SRINIVAS COLLEGE OF ENGINEERING
 B.E IN ELECTRONICS AND COMMUNICATION
2018-2020

PROJECTS

BURGER-BUILDER

This was one of my first projects in react ,where in i've learnt and implemented a lot of things.I've used React 16/jsx pages, React Router, React-Thunk,Redux for state management, Axios Pure JavaScript, CSS3, HTML5, FireBase for Database and Hosting.This is a very simple application where in you could build your own burger and Proceed to checkout.It also has an authentication page. where in you will have to create your account first and then proceed purchasing

CORONA TRACKER

Coronavirus disease (COVID-19) is an infectious disease caused by a newly discovered coronavirus.I've built a real time coronovirus tracker where you would be getting the Live statistics and coronavirus news tracking the number of confirmed cases, recovered patients, tests, death toll due to the COVID-19..

WEATHER-APP

This is a simple weather app built with react,which gives you the current temperature of the city entered.I have used openWeather API to fetch real time data.You just have to Enter your prefered city and click on enter and you will be getting the current weather data.The aim of this project was to make it resonsive,so that it looks good even on mobile devices.
